

Privacy Policy for SQL QueryCraft

Effective Date: August 4, 2025\ **Tool Name:** SQL QueryCraft\ **Developer:** Reem Albawardi

Introduction

SQL QueryCraft is a custom AI tool designed to help users automatically generate accurate SQL queries based on a predefined set of data tables and KPI definitions. This tool is used primarily for internal use within the analytics departments and does not collect, store, or share any personal data.

1. What This Tool Does

SQL QueryCraft is a private GPT-powered assistant that:

- Uses a predefined database schema provided by the developer.
- Accepts user questions related to data analysis.
- Generates SQL queries by referencing the uploaded schema and KPI definition cards.
- Does not allow users to upload, send, or connect live data.

The tool runs exclusively within OpenAI's GPT environment and uses a static, secure reference file hosted via JSONBin.io to interpret database structure.

2. What Data We Collect

SQL QueryCraft does **not** collect or store any of the following:

- Personal information (e.g., name, email, IP address)
- Chat content or messages
- Uploaded user files or datasets
- Any form of identifiable user behavior or interaction logs

There are no cookies, trackers, or analytics involved in the use of this tool.

3. Data Source and Integration

The only data used by SQL QueryCraft is the currently static database schema that was:

- Converted to JSON by the developer
- Uploaded to JSONBin.io and made temporarily public for tool functionality
- Not editable or modifiable by users

The tool does connect to live databases, third-party APIs, or external systems.

4. Use of the Tool

This tool is used strictly for:

- Educational and testing purposes
- Internal analytics query automation
- Assisting users in writing correct SQL queries based on KPIs definition cards and the schema

It is **not intended for public use** or distribution, and all outputs are based on predefined data logic.

5. No Sharing of Data

SQL QueryCraft does not share any user data with:

- Third-party platforms
- Advertisers or marketing providers
- External systems or analytics tools

Since no user data is collected, nothing can be shared.

6. Future Updates

This is a temporary privacy policy intended for development and testing phases. A full privacy policy will be published once the tool is fully approved for public release.

7. Contact Information

If you have any questions about this privacy policy or the tool itself, please contact the developer
